DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-6 are rejected under 35 U.S.C. 102(b) as being anticipated by Morishige et al (US 5,092,198).

Morishige et al disclose a hydraulic pressure sensor failure control system for a belt-type continuously variable transmission having a transmission mechanism constructed by winding a belt around pulleys comprised of a primary pulley connected to an engine side and a secondary pulley connected to an output shaft, applying a primary pressure and a secondary pressure which respectively use a line pressure as an original pressure to the primary pulley and the secondary pulley, comprising: a primary hydraulic pressure sensor (55) for detecting the primary pressure; a secondary hydraulic pressure sensor (89) for detecting the secondary pressure; pulley reverse rotation detecting means (83) for detecting reverse rotation of the pulleys; primary pulley torque capacity calculating means (col. 14 line 45 – col. 15 line 52) for calculating a

torque capacity of the primary pulley from the primary pressure; and pulley reverse rotation time control means for performing a predetermined control on the basis of the torque capacity of the primary pulley when the reverse rotation of the pulleys is detected (col. 23 lines 1-30); wherein said primary pulley torque capacity calculating means calculates the torque capacity of the primary pulley on the basis of the secondary pressure detected by the secondary hydraulic pressure sensor when the primary hydraulic pressure sensor fails (see Fig 12, S126-S128, col. 23, lines 30-39).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
